

Turning waste heat into profit - is it really possible?

Cross Refrigeration say that it is possible and are proving it throughout Ireland and the UK with their award winning ThermoSavesystem.

Cross Refrigeration, leaders in global supply and installation of refrigeration and air conditioning systems, have recently celebrated picking up the "Green End User of the Year" award at the Cooling Industry Awards in London.

The ThermoSaveSystem utilises the waste heat from the refrigeration system, converts it into hot water through a heat exchanger, which in turn provides space heating and domestic hot water.

Sounds simple? Whilst the technology behind the systems is not, the result of the process is very straightforward – waste heat becomes profit.

Just ask, Gerry Dolan at Dolan's Centra, Enniskillen, who is delighted, but not surprised with the results, having had the ThermoSaveSystem installed in his store for over a year.

"I have been able to slash my heating bills. I have been delighted with the ThermoSaveSystem and Cross refrigeration were brilliant in the process of installation."

Adds Commercial Sales Director for Cross Refrigeration, Joe Conway: "This is a genuine pioneering product in many sectors – supermarkets, convenience stores, food processing plants, and indeed any business that need hot water and uses refrigeration – and that includes hospitals. This is a massive step forward in environmentally friendly refrigeration and air conditioning, and gives almost immediate payback to end users".

Cross Refrigeration will be running a series of Regional seminars to promote the system at the start of 2006.

Andrew Nesbitt, Group Managing Director and Joe Conway, Commercial Sales Director, Cross Refrigeration
