# Turning waste heat into profit - is it really possible?

CROSS REFRIGERATION SAY THAT IT IS POSSIBLE AND ARE PROVING IT THROUGHOUT IRELAND AND THE UK WITH THEIR AWARD WINNING THERMOSAVESYSTEM

■ Andrew Nesbitt, Group Managing Director and Joe Conway, Commercial Sales Director, Cross Refrigeration

With operations in Armagh, Cork, Dublin and Limerick, Cross Refrigeration are the leaders in global supply and installation of refrigeration and air conditioning systems, and have recently celebrated picking up the "Green End User of the Year" award at Cooling Industry Awards in the Royal Lancaster Hotel, London in September.

The ThermoSaveSystem offers an engineered solution for the economical heating, cooling and ventilating of supermarkets and commercial premises. Essentially the system utilises the waste heat from the refrigeration system, converts it into hot water through a heat exchanger, which in turn provides space heating and domestic hot water.

Sounds simple? Whilst the technology behind the system is not, the result of the process is very straightforward – waste heat becomes profit. Just ask, Gerry Dolan at Dolan's Centra, Enniskillen. The County Fermanagh man has been

delighted, but not surprised with the results, having had the ThermoSaveSystem installed in his new Centra store for over a year.

"The business benefits speak for themselves; I have been able to slash my heating bills. I have been delighted with the ThermoSaveSystem and Cross Refrigeration were brilliant in the process of installation." said Dolan.

Commercial Sales Director for Cross Refrigeration, Joe Conway believes the TSS, offers more than just business benefits. "This is a genuine pioneering product in many sectors – supermarkets, convenience stores, food processing plants, and indeed any business that needs hot water and uses refrigeration – and that includes hospitals. Its value in a more environmentally-aware society has just been acknowledged at the Cooling Industry Awards, and the system has been assessed by Invest NI, and

approved by the Carbon Trust. This is a massive step forward in environmentally friendly refrigeration and air conditioning, and gives almost immediate payback to end users"

The ThermoSaveSystem has been already installed throughout Northern Ireland and the Republic, and is attracting the attention of the major multiples throughout the UK.

Conway added 'With the interest the ThermoSaveSystem has been attracting, we intend to run a series of Regional seminars at the start of 2006, and are very excited with the interest shown to date.'
